of one hundred, offers more practical experience for the majority of the students than any other training factor of the school. These productions are executed in connection with dramatic art courses. They consist of full length and one-act plays selected, directed, and produced by students as laboratory projects. Criticisms are offered by the faculty. Approximately seventy plays are being presented on the studio stage this season, many of them written or adapted by students.

It was for the first dramatic society on the campus that Lynn Riggs, '23ex, one of the country's most promising playwrights, wrote his first play for produc-

tion. Riggs has had four of his plays produced on Broadway.

The Playhouse is quite anxious to encourage native playwrights by producing all worthwhile material.

Jones, director of the school, is at the head of the seventh region of the National Theatre Conference. In this division, which includes Texas, Arkansas, Louisiana, New Mexico, and Oklahoma, are found two of the best Little Theatres in the country—La Petite group of New Orleans, and the Dallas organization. Jones has announced a regional conference will be held at the University April 13 and 14. A nationally known leader will speak.

Sooner Roll Call

YOUNG-PIPKIN: Miss Betty Young and James Anton Pipkin, '32ex, February 3 in Oklahoma City. Delta Tau Delta. Home, Miami.

Read about this NEW kind of service to Europe

LOW COST TRIP TO EUROPE! They said *it couldn't be done...* with two-bed rooms; hot and cold running water in every cabin; abundant and delicious food; the unrestricted use of the ship with its spacious decks, veranda cafe, and recreation rooms. But *it can be done.* We proved it last year to students, teachers, scientists, professional people and family parties. They were so delighted (and surprised) at the comforts and steadiness of our ships and the congenial friends they met aboard that they wrote hundreds of unsolicited letters to us. Those letters are a remarkable verdict on this new kind of service to Europe (New York—Havre—Antwerp). Would you like to read some of these letters? May we tell you about it?

AND your car can go along in the ship's garage at the lowest rate on the Atlantic

That's the most economical way to explore Europe, especially for a party of four or five persons. You will see more and pay less if you take your own car. May we tell you about roads and motoring abroad?

Ask your agent, or write to us

ARNOLD BERNSTEIN LINE, Dept. 73
 17 Battery Place, New York, N. Y.

YES! Tell me about the new kind of service to Europe. I am especially interested in:

- Passenger (the low cost way)
- My car (the lowest rate on the Atlantic)

PETROLEUM ENGINEERING

(CONTINUED FROM PAGE 132)

A doorway has been built on the north side of the second floor, and a walkway on the refinery tower and the laboratory constructed between the run-down house room. This eliminates the necessity of carrying samples down the refinery stairs, through the building and upstairs to the testing laboratory.

The instrument room is being made over by adding inclined shelves which carry sawed-out sections to fit the various pieces of apparatus and glassware.

Cutaway models and the like have been secured to build a typical Oklahoma City Christmas tree. This will be assembled at the front of the building south of the walk. A circular type cellar will be used. Just north of the walk an electrically operated Lufkin pumping unit will be in-

stalled. Doctor Huntington and Professor Bennie Shultz are planning to install a small cracking unit just west of the refinery superheater.

A decided increase in the enrollment in the petroleum engineering school was noted this year. The student body is well represented in the engineering honor societies and takes a great part in outside activities beside holding a scholastic standing well above the average. Last fall the Petroleum Engineers club was organized. This meets twice a month to study and discuss papers given by students and men in the industry. The club is affiliated with the American Petroleum Institute and the American Institute of Mining and Metallurgical Engineers.

With these and other improvements planned for the future, the faculty and students of the school of petroleum engineering mean to hold the prestige of the finest petroleum school in the country if not in the world.
