ANIMAL PSYCHOLOGY

the right or left by a door. He then crosses to the opposite side, where he must choose his own response in terms of the direction he was forced to go in the cue compartment. There is no sign here to indicate which direction to take.

Approximately one hundred rats have completed the problem to date. The results show that some rats can learn the problem while others can not. Some learn it with ease while others find it extremely difficult. The results justify the inference that learning is primarily a muscular function, that is, in this problem the rat gets a directional orientation as it makes the lateral excursion to the right or to the left through the cue compartment and responds in terms of this muscular set-up at the crucial points in the response compartment on the opposite side.

The argument supporting this assumption is many fold. The introduction of any condition which is calculated to disrupt this muscular pattern, such as distractions and emotional disturbances due to extraneous noise or electric shock which cause the rat to stop or hesitate while running, will reduce the scores very materially.

Thus the rat can respond to the representation of stimulus factors which are not present at the time of the response. It perhaps represents the genesis of symbolism exhibited by human subjects in such processes as ideation, imagination and reasoning.

THE PROVINCE OF THE LAW

(CONTINUED FROM PAGE 239)

of able men whom the vocation attracts makes competition extremely keen. Success is coming more and more to be possible only to the person who combines with special personal qualifications, a competent educational preparation. In general it may be said that while the profession offers very large financial rewards to a successful few, these prizes are keenly contended for and are the rewards only of exceptional ability backed by competent training.

The largest rewards by way of income are given to lawyers who become legal advisers of large business enterprises. But the greatest rewards in a more immediate sense are found in the pursuit of the profession conceived as a form of public service. The opportunities of a lawyer to assist in the development of a better social order have always been, and will increasingly be, his greatest reward. No field of public service offers a wider range of opportunities to men of different talents and tastes.

I am often asked for preliminary ad-

vice by persons contemplating the study of the law. The question is, does this closely crowded, highly difficult profession offer possible rewards sufficient to constitute an inducement to tempt ambitious young men to seek to obtain the fruits of legal professional success? To answer this question it is first necessary to postulate the possession of a proper ideal and unless he is willing to work toward the end of making himself a high class, honorable and ethical lawyer he had better stop on the threshold and not enter at all into this difficult field.

My advice to such a person is study yourself carefully and take an inventory of your qualities. Make a catalog of your talents before deciding. Are you physically fit? Do you have vigorous health? Are you capable of enduring great nervous strain? Are you reasonably free from bilious and nervous breakdowns that often attend on the trial of long and difficult cases. Is your eyesight good and can it endure the immense amount of reading required in the profession? Is your voice attractive? Does it have power? Does it carry conviction? Are you mentally quick and acute or are you slow and labored. The legal profession has no place for you unless your mentality is vigorous, your intellectual perception keen, your power of analysis of a situation more than usual. Are you capable of concentrating upon difficult problems hour after hour and far into the night? It is necessary that the successful candidate should be a man inured to labor, and one who expects to attain success not by genius but by industry.

The temper of a lawyer is an enormous factor in his success. It must be under control. Nothing is more disastrous than to let it escape. Whom the gods wish to destroy they first make mad applies more completely perhaps to the trial lawyer than to any other professional man. The gift of expression, of smooth, attractive, convincing speech is a great asset to the lawyer. Not that it is necessary to be born with the "gift of gab," rather is it necessary for one through many years to cultivate his vocabulary and the habit of thinking upon his feet and expressing himself in exact, clear terms. I have known many young men who had no special gift of speech who became through earnest and persistent practice skillful and magnetic public speakers. In this connection the main point is to know your case and know your thought. If you have no cloudiness in your thinking, no cobwebs in your brain, but on the other hand are full of your case, enthusiastically determined to try it right, then with a good vocabulary and education and reasonable preliminary practice in public
