

Sooner Geologists Go Everywhere

By Victor E. Monnett, '12

THE one particular field of work in which the University of Oklahoma is most widely represented geographically is perhaps that of geology.

Within the last few months, the geology department sent a request for information to 750 graduates and former major students in geology—all of those whose addresses were available. Approximately half of this group responded, an unusually good response in view of the fact that most geologists change addresses so rapidly that it is difficult to keep up with them by mail.

The survey showed that all oil producing states and foreign countries are well represented by O. U. geologists. And an astonishingly small percentage of the geology alumni are earning their livelihood in other lines of work.

It is not unreasonable to claim that the new mineral wealth added to the nation's resources by the efforts of this group has amounted to enough to offset every dollar that has been expended on the entire University by the State of Oklahoma since the institution was founded.

The School of Geology has had a remarkable growth since it was established in 1901 as a department of geology with Dr. Charles N. Gould as the first and only teacher.

The total enrolment of the University that year was only four hundred. More than three times that number are now enrolled in some course in geology each semester, and approximately two hundred students are candidates for the degree of Bachelor of Science in Geology or Bachelor of Science in Geological Engineering.

The faculty of the School of Geology and the department of geology and geography now includes a total of fifteen full-time instructors in addition to a full-time librarian. With this large staff the University of Oklahoma is now equipped to offer a greater number of specialized courses in geology than almost any other college or university in the United States. The regular teaching staff is ably supplemented by the part-time services of the staff of the Oklahoma Geological Survey, by a special lecturer in geology, and by a large number of men connected with the petroleum industry who appear for one or more lectures each semester.

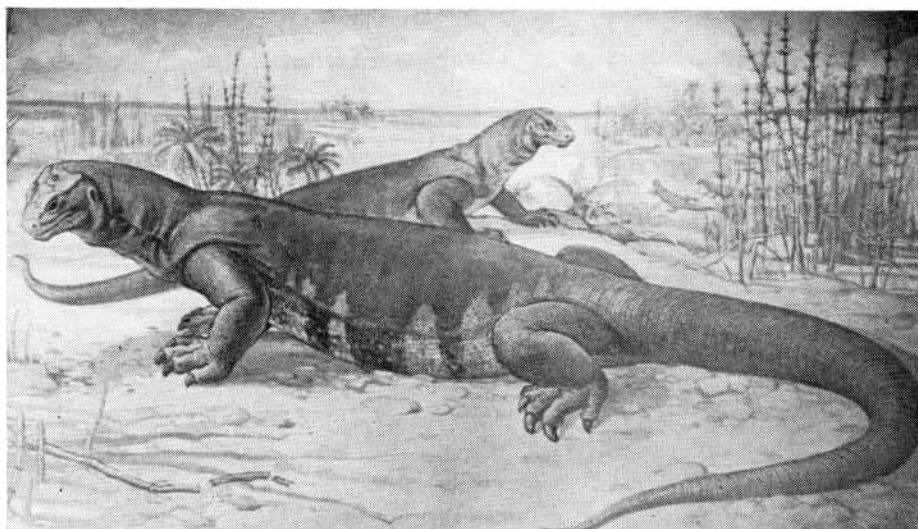

The rapid growth of the University as a whole and particularly of this branch of the University has resulted in a most unfortunate crowding of classrooms and laboratories and a very severe shortage of needed equipment. At the present time

in addition to the old Geology Building, which was outgrown before it was occupied, geology is now utilizing one-third of the Old Science Hall, part of the old frame Gymnasium, part of the space under the Stadium, part of the basement of the Business Administration building, and classrooms in several other buildings.

Graduate research rooms, experimental laboratories, and museum space are very

of experience in commercial work with major oil companies has been added to the departmental teaching staff beginning next September.

The University of Oklahoma takes pride in the fact that the largest organization of geologists has had from one to two O.U. graduates or faculty members on its list of national officers every year for the last twenty years and that its an-

The O. U. School of Geology has made notable progress in uncovering facts about Oklahoma's prehistoric days. Above is a painting by Ralph Shead, '16, of a three-eyed monster, the rare remains of which were discovered by J. Willis Stovall

urgently needed. The Oklahoma Geological Survey occupies nearly one-third of the old Geology Building and needs much more space than it has available.

Through the efforts of Dr. J. Willis Stovall and others, Oklahoma is building up a museum of Vertebrate Paleontology which is attracting nationwide attention. With the aid of several Works Progress Administration grants, enough material has already been collected and partially restored to fill a museum larger than the space in the present Geology Building.

Within the last few years the School of Geology has attempted to add to its usefulness as a training school for petroleum geologists by the introduction of new courses in sub-surface work and in sample study. For the geological engineer interested in mineral resources other than petroleum, several courses have been added in mining methods and ore treatment.

Dr. Cecil G. Lalicker, B.S., M.S., University of Oklahoma, M.A., Ph.D., Harvard University, who has had three years

nual programs always contain a high percentage of papers contributed by faculty members, students and graduates of geology from this University.

With the development of a strong School of Petroleum Engineering, Oklahoma is now in a position to offer the University student instruction in petroleum geology as good or better than he can secure anywhere in the United States.

Information as to the present business and professional connections and addresses of geology graduates, obtained in the recent survey, follows:

Absher, William F, Cities Service Oil Co, Bartlesville
