

Have students changed?

—Some professors' opinions

"OH, YES, indeed," a professor said recently, "I'd say students have changed greatly in the last ten years and—academically, at least—for the better. In fact, there's been such a change lately that we may have to revise our sophomore language course. What was new to students at that level three years ago is now old hat to most of them.

"But I have to say something negative, too," the professor went on. "I find students more neurotic, more insecure, than ever before. Most of them seem to have no goal. They're intellectually stimulated, but they don't know where they're going. I blame the world situation—the insecurity of everything today."

"I can't agree with people who see big changes in students," said another professor, at another school. "It seems to me they run about the same, year after year. We have the bright, hard-working ones, as we have always had, and we have the ones who are just coasting along, who don't know why they're in school—just as we've always had."

"They're certainly an odd mixture at that age—a combination of conservative and romantic," a third professor said. "They want the world to run in their way, without having any idea how the world actually

runs. They don't understand the complexity of things; everything looks black or white to them. They say, "This is what *ought* to be done. Let's *do* it!"

"If their parents could listen in on their children's bull sessions, I think they'd make an interesting discovery," said another faculty member. "The kids are talking and worrying about the same things their fathers and mothers used to talk and worry about when *they* were in college. The times have certainly changed, but the basic agony—the bittersweet agony of discovering its own truths, which every generation has to go through—is the same as it's always been.

"Don't worry about it. Don't try to spare the kids these pains, or tell them they'll see things differently when they're older. Let them work it out. This is the way we become educated—and maybe even civilized."

"I'd add only one thing," said a professor emeritus who estimates he has known 12,000 students over the years. "It never occurred to me to worry about students as a group or a class or a generation. I *have* worried about them as individuals. They're all different. By the way: when you learn that, you've made a pretty profound discovery."
